CAREER OBJECTIVE

Motivated and detail-oriented software engineer with a strong foundation in programming, problem-solving, and software development principles. Passionate about learning new technologies, collaborating in team environments, and building user-centered applications. Seeking an opportunity to grow within a collaborative, product-focused development team that values creativity, technical excellence, and professional development.

EDUCATION

University of North Carolina at Charlotte

2024-2024

Coding: Full Stack Web Development
Certificate

SKILLS

- HTML5
- CSS3
- JavaScript
- Bootstrap
- Tailwind CSS
- React.js
- React Router
- React Native
- PWA
- Jira
- Node.js
- Express.js
- SQL
- MongoDB
- APIs
- MVC
- MERN
- Git
- GitHub
- Vercel
- Netlify
- Agile
- Scrum
- MVC
- Mobile Application Development
- OpenAI
- VS Code
- Vite

WORK EXPERIENCE

FRONT END DEVELOPER

The Backlight Group LLC

July 2024- Present

- Collaborated in the development of cross-platform iOS and Android mobile applications using React Native.
- Developed accessible and responsive user interfaces, ensuring consistent experiences across devices using HTML, CSS, and Javascript.
- Participated in weekly standup to celebrate team successes, address weaknesses, and assign tasks.
- Worked within agile scrum methodologies to coordinate efforts across a multi-disciplinary team.
- Used a Component-Based Architecture to develop user interfaces that is broken down into reusable, independent components, allowing for modular development and easier management of complex UIs.

PROJECTS

FRONT END DEVELOPER

The Realty Group (*fictional real estate company website*)

- Developed a fully responsive real estate website using React, Vite, JavaScript, and CSS with a modern, component-based architecture.
- Built dynamic property listings and detailed property pages using reusable React components and React Router for seamless navigation.
- Designed a mobile-first, user-friendly interface focused on accessibility, clean layouts, and intuitive user experience.
- Optimized application performance through efficient component structure, reusable code, and responsive image handling.
- Managed source control with Git and GitHub and deployed the application to Vercel for live production hosting.

FRONT END DEVELOPER

Sreena (*movie and TV finder app*)

- Built a movie and TV discovery application using React and the TMDB API to display trending content and detailed media information.
- Integrated REST API calls with asynchronous JavaScript to fetch and render real-time movie and television data.
- Implemented dynamic routing, search functionality, and detailed media pages using React Router.
- Developed a Favorites feature using Local Storage to persist user-selected movies and TV shows across browser sessions.
- Created a responsive, mobile-friendly interface with reusable React components and clean, maintainable code following modern front-end development practices.

MOBILE APPLICATION FRONT END DEVELOPER

Dorpamine (*growth and support mobile platform*)

- Collaborated with Backend team on API development using Swagger documentation and the OpenAPI framework.
- Integrated reusable components, achieving a cohesive brand identity and increased performance reliability.
- Built cross-platform mobile features with React Native, enhancing user experience across Android, iOS, and web platforms.
- Used version control systems (Git) to manage source code changes and collaborated with team members on code merges and conflict resolution.
- Utilized frameworks such as React Native to build scalable, maintainable applications, using a shared code base for iOS and Android development to create reliability.
- Collaborated with a team using Agile methodologies such as Kanban and Scrum. The team consisted of a Project Manager, Front End and Back End Developers in consistent stand ups to ensure that the team maintained open communication concerning current progress and new assignments.
